

PLIN-View Pro

Product Overview

The PLIN-View Pro LIN monitor for Windows is supplied with every PC LIN interface from PEAK-System. Incoming LIN messages can be viewed using this software, with LDF files (LIN Description Files) enabling the symbolic display of LIN messages. Outgoing LIN frames can be defined depending on master or slave operation mode.

The software also utilizes LIN functionality of the supported hardware, such as the on-board scheduler and automatic bit rate detection.

Key Features

- Display of incoming LIN frames
- Symbolic display of LIN messages using LDF files
- Master or Slave operation modes
- Administration and processing of schedule tables
- Configurable recording of LIN frames (trace)
- Display and recording of bus events (bus sleep, wake-up, overrun)
- Automation of processes with VBScript
- Automation of LIN data and elements with C# scripts
- Optional use of C# assemblies
- Integrated text editor for C# with syntax highlighting

System Requirements

- Windows 11 (x64/ARM64), 10 (x86/x64)
- Microsoft .NET Framework 4.0
- For LIN bus connection: PC LIN interface from PEAK-System
